AI Fluency Workflow

Use AI where it helps. Keep your judgment in the work.

CORE RULE

You remain the owner of AI-assisted work.

- DECIDE
- GENERATE
- EVALUATE
- APPLY

A practical check before AI-assisted work becomes real work.

Move from task to useful output without losing privacy, accuracy, or human ownership.

01 DECIDE — 02 GENERATE — 03 EVALUATE — 04 APPLY

01 DECIDE

Should AI be part of this task?

- Does this task benefit from using AI?
- Am I using information that is sensitive or private?
- Who could be affected by the use of AI in this task?

Use only approved AI tools and work accounts.

02 GENERATE

Give AI useful direction.

- Provide enough relevant context.
- Be clear about what you're trying to create.
- Specify what a useful result needs to include.

Need help? Use the Prompt Library.

03 EVALUATE

Can you stand behind the output?

- Is it accurate and supported by source information?
- Is anything missing, distorted, or overly certain?
- Who could be affected if this is wrong or biased?

Would I put my name on this?

04 APPLY

Turn output into work you're prepared to own.

- Refine, remove, or correct what needs attention.
- Verify important information using an authoritative source.
- Follow the normal process - and own the final work.

AI supports the work. You remain responsible.

NOT SURE? **Stop and check the Northstar AI Guidelines before continuing.**
